

# IT'S NOT EASY BEING GREEN

**Green.** It's a word that assures that a product is produced with concern for the environment. But what does it take to back up that promise?

At Bridge-Gate, we start with the purest raw materials derived from agricultural waste. Then we manufacture our molded fiber pulp products with our own advanced technologies, conserving energy and water and protecting the environment at every step of the process, from our unique Biopulping technology to the way we transport our goods to market.

Our patented Biopulping zero-pollution manufacturing process allows us to make our products with a fully self-contained, water-saving washing process. And because we've also eliminated the standard pulp drying process, we use less energy and water to produce a chemical-free product that meets or exceeds industry standards for compostability.

With Bridge-Gate, you and your customers can be assured of compostable, consistently high-quality products that have been produced to minimize ecological impacts from field to factory to foodservice.

Bridge Gate Alliance Group will never make a claim that is not backed by third party evidence.
