

Compostable Gloves

Introducing the new Planetgards® Compostable Gloves, reducing landfill waste through composting and delivering the durability needed for foodservice use.

Making Way for Change

Environmental initiatives in industry and government worldwide are being enacted more than ever, especially those aimed at reducing landfill waste. To join these efforts, Handgards® proudly introduces new Planetgards® Compostable Gloves. Planetgards® offer a solution to help meet zero waste and sustainability goals by delivering foodservice gloves that are made of material that composts in a commercial composting facility.

MADE
IN THE
★ USA ★

Proudly made in the U.S.A

By manufacturing domestically, Planetgards® contributes to a stronger U.S. economy while reducing transportation emissions. For greater impact, Planetgards® also partners with Green Bay Packaging to provide corrugated packaging that is Sustainable Forestry Initiative (SFI®) certified, meaning that at least two-thirds of packaging fiber materials are from sustainable sources.

Strong. Dependable. Compostable.

Planetgards® Compostable Gloves provide a new way to care for the environment while securing food safety. Comfortable and durable, each pair is a quality tool for completing foodservice tasks such as making sandwiches, prepping salads, serving pastries, cafeteria service and more. After use, Planetgards® Compostable Gloves can be given a new life as compost, since these gloves are made of material certified to degrade in a commercial composting facility.

Starts Community Conversations

There's change happening all around the world. Planetgards® can jumpstart community conversations about composting programs for all organic resources, promoting sustainability and reducing pollution.

Helps Meet Zero Waste Goals

Planetgards® offers the option of taking a foodservice product used every day and taking it back to the earth to help the environment instead of letting it pile up in a landfill.

Goes on to a New Life

In a commercial composting facility, Planetgards® can become compost or mulch to help plants grow in gardens, parks, and farms, reducing landfill waste and emissions.

Made in the U.S.A.

Planetgards® are manufactured domestically in West Texas. This means that each pair is produced using American labor, strengthening local economies and emitting less pollution.

APPLICATIONS

- Making sandwiches
- Fresh salad prep
- Food sampling
- Pre-portioning
- Buffet serving
- Catering service
- Handling pastries
- General cleaning tasks

FEATURES AND BENEFITS

- Loose-fit design for easy-on easy-off use
- Compost to reduce landfill waste and methane emissions
- Durable material and translucent green color
- Can help reduce landfill disposal fees through composting programs
- Made in the U.S.A. to reduce overall transportation emissions and shrink our carbon footprint
